

Letter of Gratitude

To General Director of
Corrocoat Caspian LLP
Mrs. Aliya Zhumanova

Dear Aliya Nartayevna!

Under the contract with Pavlodar refinery No. 16901.06 dd. April 18, 2018 Corrocoat Caspian LLP provided corrosion protection of the internal surface of three aviation fuel storage tanks V-10,000m³ each (tanks number P-2, 4, 5 of the "П29-2 petroleum products compounding and shipment park") with total area of 14,130m². These works were performed in accordance with the "Requirements for anticorrosive coatings of storage tanks for aviation fuel and lubricants" (Appendix to the State Civil Aviation Authority Letter of the Ministry of Transport of Russia as of June 21, 2002 No. 17.4-34GA) (hereinafter referred to as - Works).

The coating had to protect the internal surface of the tanks from corrosion and at the same time have no effect on the quality of jet fuel (TS-1 grade), and as per testing results from Russian Aviation Institute "GosNII GA" (No.2-2018) Corrocoat ZIPE positively passed both criteria.

Corrocoat Caspian' specialists demonstrated high professionalism in organizing and performing application works, and were very cooperative and flexible with Pavlodar refinery.

Pavlodar refinery expresses its gratitude for the high-quality of works performed in the shortest possible time in compliance with all our regulatory requirements, technical documentation and recommendations.

One of the critical issue was to provide positive test results from Russian GOS NII GA laboratory in Moscow, where fuel samples from each of three tanks were tested after 21 days contact with Corrocoat Zip E.

Pavlodar refinery recommends Corrocoat Caspian as a reliable partner for both coating supply and application works for protection of steel structures and process equipment for petrochemical and refining industries.

We hope to continue such a positive relationship with this company.

General Director

O. Alseitov
