To General Director of
Corrocoat Caspian LLP
Mrs. Aliya Zhumanova

Recommendation letter

As a part of the rehabilitation and corrosion protection project for sorption columns made of stainless steel at uranium mines and deposits of the “Ortalyk” Production enterprise” LLP in the South Kazakhstan region, your company offered to use Polyglass vinyl-ester coating systems as well as composite wrapping and laminating technologies for reinforcement of weld joints, restoring geometry of steel structures and filling corrosion pits and micro-crevices.

These systems allowed us to solve several problems simultaneously, such as protection from highly aggressive environments and chemical attack, reinforcement of stainless steel structures, abrasion and erosion, which are common for columns and tanks at our facilities.

“Ortalyk” Production enterprise” LLP expresses its gratitude for the high-quality materials which are manufactured and supplied in the shortest possible time. We consider Corrocoat Caspian LLP as a reliable partner for the supply of high-technology anticorrosion coatings and systems for the uranium industry.

We hope to continue such a positive relationship with this company in future.

Deputy General Director
for Production

B. Aiduisenov
